

MAJOR PLAY FUSION HELIX

Major Play® Fusion™ Helix is a blended workhorse turf with two types of fibers. The configuration and weight of fibers are customized for each area of the field, guaranteeing true playing characteristics of natural grass with minimal maintenance. Major Play's monofilament and slit-film fibers are manufactured with dual colors for a natural look. Helix Technology allows the fibers to spring back quickly after use, providing a long-lasting investment.

HELIX FIBERS

The Helix technology adds structure and strength to each monofilament fiber. Every fiber acts like a muscle and bounces back after use – the field will wear better, look better, hold infill, and eliminate fly-out.

VELOCITY XP2® FIBERS

Dual color slit-film fibers provide the look of natural grass with enhanced reliability and durability.

EQUAL PILE HEIGHTS

Major Play® systems use a consistent pile height across the field that is ideal for baseball and softball. It balances ball-to-surface interaction, field durability, and player protection. Major Play fields provide:

- Predictable hops and bunts (no lip between pile heights)
- Superior durability in high use areas (shorter pile heights in clay areas wear out more quickly)

INFILL & PEA GRAVEL

Hellas offers a variety of infill options including Realfill® Infill made of dust-free SBR granules. Cooler, more natural offerings are available, such as Geo Coolfill® (with organic cork and coconut fibers) and Ecotherm® Infill (with TPU and cellulose fibers).

The pea gravel provides ballast and a natural feel while assisting shock absorption and drainage.

The ratios of infill materials are tailored to each area of the field, providing:

- Natural ball response and speed
- Superior impact attenuation, especially in skin areas
