A TURF MAINTENANCE AND GROOMING SERVICE by HELLAS

CLEAN SWEEP™

Clean Sweep™ by Hellas is a cleaning, grooming and maintenance service that quickly cleans and revitalizes your field. All synthetic turf fields, because of their high level of usage and foot traffic, have a lifespan, but Clean Sweep can help insure that your field looks great, plays great and last much longer.

Clean Sweep™ provides several different service options for your turf durability and improvement:

- ⦿ De-compactor - The de-compactor machine lifts and loosens the infill that has become compacted over the years. The softens the surface and helps lift the turf fibers spring up to their original position.
- ⦿ Clean Sweep™ - The most important and obvious service offered is performed by the Clean Sweep™ machine. The Clean Sweep™ brush is run across the top layer of the turf and sweeps up loose rubber and debris. Oscillating pans collect and throw away debris while also redistributing the infill back into the playing surface. This service allows for a softer surface and a much cleaner field. The Clean Sweep™ machine is also equipped with a powerful 6-foot tow behind magnet that pulls unwanted ferrous material from deep within the infill.
- ⦿ Disinfectant Spray - An anti-microbial disinfectant spray can also be applied to your synthetic turf. This disinfectant is non-flammable, non-corrosive, and odorless without the fumes or skin irritation associated with traditional disinfectants. It is strong enough to kill the most dangerous viruses and bacteria (MRSA) in a hospital environment, yet EPA registered for use on children's toys at home.
- ⦿ Repair Package - Damaged turf and seam repair and/or replacement.

Clean Sweep™ Equipment

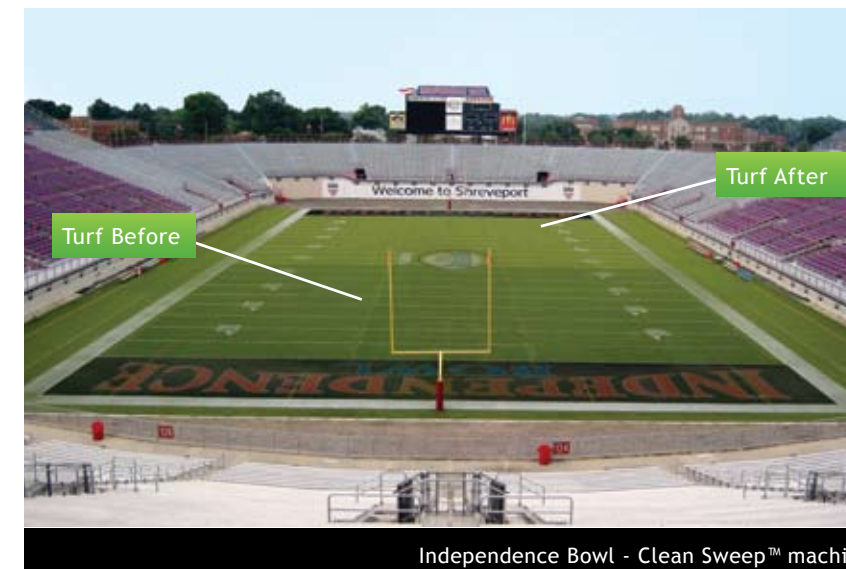

Broken Fibers and Debris Collected in Clean Sweep™

Anti-microbial Disinfectant Spray

Helmet Hardware , Spikes & Metal Collected from Magnet

Independence Bowl - Clean Sweep™ machine

Need your field groomed for the season?
