HELLAS CONSTRUCTION BUILDS FOOTBALL FIELD FOR DENHAM SPRINGS HIGH SCHOOL, LOUISIANA

The Best in Synthetic Turf and Pad Technology Selected

Austin, Texas December 21, 2010 – Denham Springs new football field project will kick off December 27. Hellas' construction crews will be on site to start preparing the field for the installation of a Cushdrain® pad and Matrix® synthetic turf. The product combination was selected carefully both by the School and the Architect involved in the project.

Alan Amos, architect with Alvin Fairburn & Associates said important factors in the selection process were the temperature of the turf and a contractor that could "do it all." Hellas builds, manufactures and installs its products with the company's own construction and installation crews. "Having one point of contact for the project was a key factor," says Amos.

Dru Nettels, Athletic Director and Head Football Coach at Denham Springs is excited to switch from grass to synthetic turf. "It will be a tremendous addition for the High School, Junior High, youth and soccer leagues that will all benefit from the upgrade," says Nettles. Denham Springs is one of those schools that have a large variety of sporting events on the field year around and graduation, so the installation of synthetic turf will help in terms of maintenance and lessening down time.

About Hellas Construction, Inc. Headquartered in Austin, Texas, Hellas Construction is one of the largest sports contractors in the United States. The company specializes in the general construction of sports facilities and synthetic surfaces. For more information visit www.hellasconstruction.com
